## IInd Midsemestral exam 2004

## Algebra IV: B.Sury

1. Let $M, N$ be left $A$-modules and suppose $N$ is semisimple. If $\alpha, \beta$ : $M \rightarrow N$ are in $\operatorname{Hom}_{A}(M, N)$ such that Ker $\alpha \subseteq \operatorname{Ker} \beta$, show that there exists $\theta \in 0 \operatorname{End}_{A}(N)$ satisfying $\beta=\theta o \alpha$.
2. Let $A$ be any commutative ring and let $G$ be a finite group. Show that the group ring $A[G]$ is left Noetherian (that is, any ascending chain of left ideals is finite) if, and only if, it is right Noetherian. You may use the map $\sum_{g} a_{g} g \mapsto \sum_{g} a_{g} g^{-1}$.
3. Let $G$ be a finite group and $f, g: G \rightarrow \subseteq$ be class functions. Prove Plancherel's formula : $<f, g>=\sum_{i=1}^{s}<f, \mathcal{X}_{i}><\mathcal{X}_{i}, g>$ where $\mathcal{X}_{1}, \ldots, \mathcal{X}_{s}$ are the irreducible characters of $G$.
4. Consider the following character table of a finite group (where $\omega=$ $\left.e^{2 \pi i / 3}\right)$ :

|  | $g_{1}$ | $g_{2}$ | $g_{3}$ | $g_{4}$ | $g_{5}$ | $g_{6}$ | $g_{7}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathcal{X}_{p 1}$ | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| $\mathcal{X}_{p 2}$ | 1 | 1 | 1 | $\omega^{2}$ | $\omega$ | $\omega^{2}$ | $\omega$ |
| $\mathcal{X}_{p 3}$ | 1 | 1 | 1 | $\omega$ | $\omega^{2}$ | $\omega$ | $\omega^{2}$ |
| $\mathcal{X}_{p 4}$ | 2 | -2 | 0 | -1 | -1 | 1 | 1 |
| $\mathcal{X}_{p 5}$ | 2 | -2 | 0 | $-\omega^{2}$ | $-\omega$ | $\omega^{2}$ | $\omega$ |
| $\mathcal{X}_{p 6}$ | 2 | -2 | 0 | $-\omega$ | $-\omega^{2}$ | $\omega$ | $\omega^{2}$ |
| $\mathcal{X}_{p 7}$ | 3 | 3 | -1 | 0 | 0 | 0 | 0 |

Find the order of the group and cardinalities of the conjugacy classes.
5. If a finite group has exactly three irreducible complex representations, prove that it is isomorphic either to $\mathbb{Z} / 3 \mathbb{Z}$ or to $S_{3}$.
6. Let $K$ be algebraically closed and suppose $G \subseteq G L_{n}(K)$ is a finite group which is completely reducible. Prove that there exists $P \in G L_{n}(K)$ such that $P A P^{-1}$ is a diagonal matrix for all $A \in G$
7. Prove that every simple ring must be of the form $M_{n}(D)$ for some division ring $D$ and some $n$.
8. Let $A$ be a left Artinian ring (that is, every decreasing chain of left ideals is finite). If the $\operatorname{Jacobson} \operatorname{radical} \operatorname{Jac}(A)$ (the intersection of all maximal left ideals) is zero, prove that $A$ is left semisimple.
9. $G \subseteq G L_{n}(\subset)$ be a finite group such that for some $r \geq 1, \sum_{g}(\operatorname{tr}(g))^{r}=0$. Prove that $\sum_{g} g_{11}^{r}=0$ where
