B.MATH - First Year, First Semester, 2013-14
Probability Theory-I, Semestral Examination, November 15, 2013

1. Let $p(x)$ be the probability mass function of a non-negative integer valued random variable and let U be the uniform random variable on the interval $[0, 1]$. Find a real valued function g such that the probability mass function of the random variable $X = g(U)$ is $p(x)$. [7]
2. Assume that the number of eggs laid by an insect follows a Poisson distribution with parameter λ . Once laid, each egg has probability p of hatching, and the hatching of one egg is independent of the hatching of the others. An entomologist studies a set of $n \geq 1$ such insects, observing both the number of eggs laid and the number of eggs hatching. Assume that the different insects and their descendants behave independently. Let T denote the total number of eggs laid and S denote the total number of eggs hatching in this experiment.
 - (a) What is the probability distribution of S ?
 - (b) Find $Cov(T, S)$ and $\rho(T, S)$.
 - (c) Consider one of the insects mentioned above. Suppose you are told that the number of eggs hatching (of this insect) is y . Find the probability distribution of the number of eggs laid by this insect. [15]
3. Suppose that X is a non-negative continuous random variable such that $Y = \log(X)$ has the normal distribution with mean μ and variance $\sigma^2 > 0$.
 - (a) Find the p.d.f. of X .
 - (b) Find $E(X)$ and $Var(X)$.
 - (c) Find $P(c_1 < X < c_2)$ where $c_1 = \exp(\mu + \sigma)$ and $c_2 = \exp(\mu + 2\sigma)$. [13]
4. Suppose X is a continuous random variable which is symmetric (about 0). Define $Y = |X|$ and, $I = 1$ if $X \geq 0$; $I = 0$ otherwise. Show that, for any $y > 0$, $P(Y \leq y|I = 1) = P(Y \leq y|I = 0) = P(Y \leq y)$. [8]
5. Consider an experiment in which a pair of balanced dice are rolled repeatedly in independent trials. For each $n \geq 1$, let X_n denote the number of trials in the first n trials where the sum of the dots that show up is at least 10. Find a good approximation for $P(24 \leq X_{180} \leq 42)$. [7]
