Probability Theory I

21.9.2011

Time:  $2\frac{1}{2}$  hours.

Maximum Marks : 80

*Note:* The paper carries 83 marks. Any score above 80 will be taken as 80. State clearly the results you are using in your answers.

1. [10+10=20 marks] Two persons, A and B, shoot at a target independently. Suppose A hits the target with probability 0.4, and B hits it with probability 0.7.
  - (i) Given that the target is hit, find the probability that A hit it.
  - (ii) Given that exactly one person hit the target, find the probability that A hit it.
  
2. [9+7+6=22 marks] From a standard pack of 52 cards, 3 cards are drawn at random without replacement. Let  $X$  denote the number of aces, and  $Y$  the number of kings drawn.
  - (i) Find the joint discrete density function of  $X, Y$ .
  - (ii) Find the marginal discrete density functions.
  - (iii) Are  $X$  and  $Y$  independent? Why?
  
3. [13 marks] Let  $X$  and  $Y$  be independent discrete random variables taking values in  $\mathbb{Z}$ . Show that  $X^4$  and  $Y^2$  are independent random variables.
  
4. [10+10+8=28 marks]
  - (i) Let  $x_n, n = 1, 2, 3, \dots$  be a sequence of real numbers such that  $x_{n+1} \leq x_n$  for all  $n$ , and  $\lim_{n \rightarrow \infty} x_n = x \in \mathbb{R}$ . Let  $F$  be the distribution function of a real valued discrete random variable. Show that  $\lim_{n \rightarrow \infty} F(x_n) = F(x)$ .
  - (ii) If the sequence  $\{x_n\}$  in (i) above is such that  $x_{n+1} \geq x_n$  for all  $n$ , does the sequence  $\{F(x_n)\}$  converge? Is the conclusion in (i) correct?
  - (iii) Draw the graph of the distribution function of the binomial distribution with parameters  $n = 4, p = \frac{1}{2}$ .
