INDIAN STATISTICAL INSTITUTE, BANGALORE CENTRE
B.MATH - Third Year, 2020-21
Statistics - III, Semesteral Examination, December 21, 2020
Marks are shown in square brackets. Total Marks: 50
Time: $2\frac{1}{2}$ Hours; submission must be complete by 1 pm
e-mail: mohan.delampady@gmail.com

You may freely consult the lecture notes, but no other books or resources may be consulted. You may use any of the results stated and discussed in the lecture notes, by stating them explicitly. Results from the assignments may not be used without establishing them. Calculators may be used. Statistical tables are provided in a separate file, Ftable.pdf

1. Suppose $\mathbf{Y} \sim N_p(\mathbf{0}, \mathbf{\Sigma})$ where $\text{Rank}(\Sigma) = r \leq p$ and let B and C be any real symmetric matrices with $\text{trace}(B\Sigma) = r_1$ and $\text{trace}(C\Sigma) = r_2$.
(a) Show that $\mathbf{Y}'B\mathbf{Y}$ and $\mathbf{Y}'C\mathbf{Y}$ are independent χ^2 random variables if and only if

$$\Sigma B \Sigma B \Sigma = \Sigma B \Sigma, \ \Sigma C \Sigma C \Sigma = \Sigma C \Sigma, \ \Sigma B \Sigma C \Sigma = \mathbf{0}.$$

(b) Show that the degrees of freedom of these χ^2 distributions can be expressed in terms of r_1 and r_2. [14+6]

2. Let $Z_i, 1 \leq i \leq 4$ be independent $N(0, \sigma^2)$ random variables. Define $Y_1 = Z_1$, $Y_2 = Y_1 + Z_2$, $Y_3 = Y_1 - Z_3$ and $Y_4 = Z_4$. Let $\mathbf{Y} = (Y_1, Y_2, Y_3, Y_4)'$.
(a) Find the probability distribution of $\mathbf{Y}$.
(b) Find the partial correlation coefficients $\rho_{12.3}$, $\rho_{12.4}$ and $\rho_{12.34}$ (between elements of $\mathbf{Y}$).
(c) Find the multiple correlation coefficient between Y_1 and (Y_2, Y_4).
[5+6+4]

3. A multiple linear regression analysis of a data set containing $n = 30$ observations on the variables $X_1 =$ Year, 1 denoting 1930, $X_2 =$ Pre-season precipitation, $X_3 =$ June rain, $X_4 =$ June temperature, $X_5 =$ July rain,

and Y = Corn Yield, for the state of Iowa, USA, yielded the following results. Here Y is taken as the response and $X_1, \ldots, X_5$ as the regressors. The regression matrix has full column rank here.

$\sum_{i=1}^{n} y_i^2 = 72551.25$, $\bar{y} = 47.81677$, $R^2 = 0.605$.

(a) Construct the ANOVA table for regression.
(b) Conduct a test at a reasonable level of significance for the usefulness of the regressors, $X_1, \ldots, X_5$, in explaining the variability of Y.
(c) What assumptions are needed to justify this analysis? [6+6+3]

Table entry for p is the critical value F^* with probability p lying to its right.

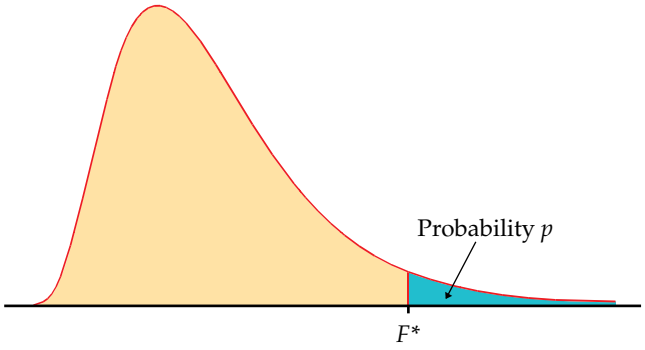

TABLE E
