## Statistics for Decision Making - I <br> Full Marks: 40 Time : 2 hr 30 minutes

Answer 1 and 2 and any two from the rest.

1. Observations are taken on yield of hay $\left(x_{1}\right)$ in 100 cuts/ acre, spring rainfall ( $x_{2}$ ) in inches and accumulated spring temperature ( $x_{3}$ ) in Fahrenheit for 20 years. The following estimates are obtained.

Sample mean vector:

$$
\bar{x}=(28.02,4.91,59.00)^{\prime}
$$

Vector of sample standard deviations: $s=(4.42,1.10,85.00)^{\prime}$
and the correlation matrix is

$$
\left(\begin{array}{ccc}
1 & 0.80 & -0.40 \\
& 1 & -0.56 \\
& & 1
\end{array}\right)
$$

Find
i) The multiple linear regression equation of $x_{1}$ on $x_{2}$ and $x_{3}$.
ii) The multiple correlation coefficient of $x_{1}$ with $x_{2}$ and $x_{3}$. And hence make a performance analysis of the regression equation
iii) The partial correlation coefficient between $x_{1}$ and $x_{3}$ eliminating the effect of $x_{2}$. $(4+3+3)$
2. a) In an examination, 9 students obtained the following marks in Economics and Statistics.

Find Spearman's rank correlation coefficient.
(6)

| Roll No. | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Economics | 45 | 60 | 32 | 45 | 32 | 32 | 58 | 56 | 47 |
| Statistics | 51 | 51 | 38 | 54 | 54 | 38 | 62 | 58 | 38 |

b) If the pdf of $X$ is given by

$$
f(x)=\left\{\begin{array}{c}
2 x e^{-x^{2}}, \quad x>0 \\
0, \text { otherwise }
\end{array}\right.
$$

Then determine the pdf of $Y=X^{2}$
(4)
3. a) Distinguish between correlation and association.
b) Explain sensitivity and specificity in the context of $2 \times 2$ contingency table.
c) Given $n=2500, f_{A}=420, f_{A B}=85$ and $f_{B}=670$, prepare a ( $2 \times 2$ ) contingency table and compute Yule's coefficient of association.
4. a) Define pseudo random number.
(2)
b) Draw a random sample of size 10 from a 2 parameter Weibull distribution with pdf

$$
f(x)=\frac{\beta}{\alpha^{\beta}} x^{\beta-1} e^{-\left(\frac{x}{\alpha}\right)^{\beta}, \quad x \geq 0}
$$

$$
\begin{equation*}
\text { Consider } \alpha=2 \text { and } \beta=0.7 \tag{5}
\end{equation*}
$$

c) Derive the expression for the mgf of chi-square distribution.
5. a) Fit a linear regression equation to the following data and compute the coefficient of determination.

| Age in <br> years | 50 | 42 | 72 | 36 | 68 | 47 | 55 | 49 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Blood <br> pressure | 147 | 125 | 160 | 118 | 149 | 128 | 150 | 145 |

b) Find $\bar{x}$ and $\bar{y}$ from the regression equations given by $\mathrm{y}=0.7+1.1 \mathrm{x}$ and $\mathrm{x}=0.25+0.687 \mathrm{y}$
(3)
6. a) Derive the expression for $\operatorname{Var}(\bar{y})$ in the context of SRSWOR. (5)
b) Discuss in brief, different types of sample allocation schemes in the context of stratified random sampling.
