E

The product of two Toeplitz operators is not necessarily a Toeplitz operator.

The product of two Toeplitz operators is not necessarily a Toeplitz operator.

Theorem (Brown–Halmos)

TFAE:

$$T_{\psi} T_{\phi} = T_{\psi \phi}.$$

2
$$T_{\psi}T_{\phi}$$
 is a Toeplitz operator.

$$ullet$$
 ϕ or $\overline{\psi}$ are analytic.

A ►

The product of two Toeplitz operators is not necessarily a Toeplitz operator.

Theorem (Brown–Halmos)

TFAE:

$$T_{\psi} T_{\phi} = T_{\psi \phi}.$$

2
$$T_{\psi}T_{\phi}$$
 is a Toeplitz operator.

(a) ϕ or $\overline{\psi}$ are analytic.

Consequence: The collection of Toeplitz operators contains two maximal algebras: analytic and coanalytic.

Toeplitz matrices

 $\phi(z) = \sum_{-\infty}^{\infty} a_n z^n$. In the standard basis:

$$T_{\phi} = \begin{pmatrix} a_0 & a_1 & a_2 & \dots \\ a_{-1} & a_0 & a_1 & \ddots \\ a_{-2} & a_{-1} & a_0 & \ddots \\ \vdots & \ddots & \ddots & \ddots \end{pmatrix}$$

The two algebras: upper triangular and lower triangular Toeplitz matrices.

Toeplitz matrices

 $\phi(z) = \sum_{-\infty}^{\infty} a_n z^n$. In the standard basis:

$$T_{\phi} = egin{pmatrix} a_0 & a_1 & a_2 & \dots \ a_{-1} & a_0 & a_1 & \ddots \ a_{-2} & a_{-1} & a_0 & \ddots \ dots & \ddots & \ddots & \ddots \end{pmatrix}$$

The two algebras: upper triangular and lower triangular Toeplitz matrices.

Finite matrices The product of two Toeplitz matrices is not necessarily a Toeplitz matrix. What are the maximal algebras of Toeplitz matrices?

伺下 イヨト イヨト

Toeplitz matrices

 $\phi(z) = \sum_{-\infty}^{\infty} a_n z^n$. In the standard basis:

$$T_{\phi} = egin{pmatrix} a_0 & a_1 & a_2 & \dots \ a_{-1} & a_0 & a_1 & \ddots \ a_{-2} & a_{-1} & a_0 & \ddots \ dots & \ddots & \ddots & \ddots \end{pmatrix}$$

The two algebras: upper triangular and lower triangular Toeplitz matrices.

Finite matrices The product of two Toeplitz matrices is not necessarily a Toeplitz matrix.

What are the maximal algebras of Toeplitz matrices?

Again the collections of upper triangular and of lower triangular Toeplitz matrices are maximal algebras. There are others!

Algebras of Toeplitz matrices (Shalom, 1987)

All maximal algebras of Toeplitz matrices are \mathfrak{A}_{α} , $\alpha \in \mathbb{C} \cup \{\infty\}$

$$\mathfrak{A}_{\alpha} = \left\{ \begin{pmatrix} a_0 & a_1 & a_2 & \dots & a_n \\ \alpha a_n & a_0 & a_1 & \ddots & \vdots \\ \alpha a_{n-1} & \alpha a_n & a_0 & \ddots & \vdots \\ \vdots & \ddots & \ddots & \ddots & \vdots \\ \alpha a_1 & \dots & \dots & \alpha a_n & a_0 \end{pmatrix}, a_i \in \mathbb{C} \right\}$$

Algebras of Toeplitz matrices (Shalom, 1987)

All maximal algebras of Toeplitz matrices are \mathfrak{A}_{α} , $\alpha \in \mathbb{C} \cup \{\infty\}$

$$\mathfrak{A}_{\alpha} = \left\{ \begin{pmatrix} a_{0} & a_{1} & a_{2} & \dots & a_{n} \\ \alpha a_{n} & a_{0} & a_{1} & \ddots & \vdots \\ \alpha a_{n-1} & \alpha a_{n} & a_{0} & \ddots & \vdots \\ \vdots & \ddots & \ddots & \ddots & \vdots \\ \alpha a_{1} & \dots & \dots & \alpha a_{n} & a_{0} \end{pmatrix}, a_{i} \in \mathbb{C} \right\}$$

Particular cases:

- for $\alpha = 0$, \mathfrak{A}_0 consists of the upper triangular Toeplitz matrices ($\alpha = \infty$: lower triangular Toeplitz matrices);
- for $|\alpha| = 1$, \mathfrak{A}_{α} is the commutant of a unitary operator of multiplicity 1.

What are the maximal subalgebras of block Toeplitz matrices?

Lemma

Suppose A and B are block Toeplitz matrices, and the entries of A commute with the entries of B. Then the following are equivalent:

- (i) AB is a block Toeplitz matrix.
- (ii) AB = BA.

Lemma

Suppose A and B are block Toeplitz matrices, and the entries of A commute with the entries of B. Then the following are equivalent:

- (i) AB is a block Toeplitz matrix.
- (ii) AB = BA.

Corollary

S is a set of commuting block Toeplitz matrices, whose entries all commute. Then all elements in the algebra generated by S are commuting block Toeplitz matrices.

Building blocks

Cyclic diagonal (of order k): $T = (T_{i-j}), T_{i-j} \neq 0$ only for $i - j = k \mod n$.

A cyclic diagonal is characterized by two matrices A_k and A_{k-n} .

伺下 イヨト イヨト

Building blocks

Cyclic diagonal (of order k): $T = (T_{i-j}), T_{i-j} \neq 0$ only for $i - j = k \mod n$. A cyclic diagonal is characterized by two matrices A_k and A_{k-n} .

Theorem

- A maximal subalgebra of $\mathfrak{T}_{n,d}[\mathcal{A}]$ is generated as a linear subspace by the cyclic diagonals it contains.
- The space of all pairs (A_k, A_{k-n}) is the same for different values of k.

u inner

- Model space and operator: $K_u = H^2 \ominus uH^2$., $S_u = P_{K_u}S|K_u$..
- Truncated Toeplitz operators: $A^{u}_{\phi}(f) = P_{K_{u}}(\phi f)$.

Theorem (Sedlock, 2011)

All maximal algebras of truncated Toeplitz operators are \mathfrak{B}_{α} for $\alpha \in \mathbb{C} \cup \{\infty\}$, where

$$\mathfrak{B}_{\alpha} = \{ A^{u}_{\phi} : \phi = \psi + \alpha \overline{S_{u} C_{u}(\psi)} : \psi \in K_{u} \}.$$

Generalizations

u inner

- Model space and operator: $K_u = H^2 \ominus uH^2$., $S_u = P_{K_u}S|K_u$..
- Truncated Toeplitz operators: $A^{u}_{\phi}(f) = P_{\mathcal{K}_{u}}(\phi f)$.

Theorem (Sedlock, 2011)

All maximal algebras of truncated Toeplitz operators are \mathfrak{B}_{α} for $\alpha \in \mathbb{C} \cup \{\infty\}$, where

$$\mathfrak{B}_{\alpha} = \{ \mathsf{A}_{\phi}^{\mathsf{u}} : \phi = \psi + \alpha \overline{\mathsf{S}_{\mathsf{u}}\mathsf{C}_{\mathsf{u}}(\psi)} : \psi \in \mathsf{K}_{\mathsf{u}} \}.$$

Particular cases:

) for
$$\alpha = 0$$
, $\mathfrak{B}_0 = \{S_u\}';$

• for $|\alpha| = 1$, \mathfrak{A}_{α} is the commutant of a unitary operator of multiplicity 1.

Matrix valued case

Model spaces and operators

- $\Theta : \mathbb{D} \to \mathcal{L}(\mathbb{C}^d)$ is inner (isometric on \mathbb{T});
- $K_{\Theta} := H^2(\mathbb{C}^d) \ominus \Theta H^2(\mathbb{C}^d).$
- $S_{\Theta} = P_{K_{\Theta}}M_z | K_{\Theta}.$

Theorem

Question

What are other maximal algebras?

Thank you!

Dan Timotin Algebras of block Toeplitz matrices
