### Problem:3

3(i) Range(y)=[0,6]

As X is outcome of a fair die i.e., 1, 2, 3, 4, 5, 6 and Y is the number of Heads in X tosses.

3(ii) Here the distribution of Y is obtained by adding all the possible values of x

(a) For y=0

$$\begin{aligned} P(Y=y) &= \sum_{x=1}^6 P(Y=y, X=x) = \sum_{x=1}^6 P(Y=y|X=x)P(X=x) \\ &= \sum_{x=1}^6 {}^x C_y p^y (1-p)^{x-y} \end{aligned}$$

(b) For  $y=1, 2, 3, 4, 5, 6$

$$\begin{aligned} P(Y=y) &= \sum_{x=y}^6 P(Y = y, X = x) \\ &= \sum_{x=y}^6 P(Y = y|X = x)P(X = x) \\ &= \sum_{x=y}^6 {}^x C_y p^y (1-p)^{x-y} \end{aligned}$$

**3(iii)**

```
> func2 = function(y,p) {
+ if(y==0){
+ sum(dbinom(y,1:6,p)/6)}
+ #To calculate binomial distribution dbinom() is used and divide by 6 to find the
+ #required probability at 0.
+ else if(y<7){
+ sum(dbinom(y,y:6,p)/6)
+ #To calculate the probability at y=1, 2, 3, 4, 5, 6.
+ }
+ else{
+   print(0)
+ }
+ }
> func2(3,0.5)
```

> func2(0,0.4)
